TAINET's SNTU 764FC series, is so called Ethernet Access Devices (EAD), Ethernet Media Data Converter (MDC) or Ethernet DSL modem, which takes advantage of the latest G.SHDSL.bis standard, is a mini-terminal enabling the transport of traffic from Ethernet interface with speed 5.7/ 11.4/ 22.8Mbps over EFM bonded 2/4/8 wires G.SHDSL.bis link.

SNTU 764FC series supports high-speed dedicated symmetrical data transmission and utilizes DSL bandwidth. The automatic line rate can be up to 15Mbps over 2-wire copper line. SNTU 764FC series works as Ethernet extender, with up to 8 wires it could enhance the line rate and provide the aggregated bandwidth over 60Mbps. Furthermore, SNTU 764FC series is line card of iEAC-16, the intelligent Ethernet access chassis, working as a central office for ISP long distance Ethernet Access Service. It covers the disadvantages of ADSL and VDSL and provides the point to multi-point services.

SNTU 764FC series is a perfect solution for Telecom Carriers, Service Providers and business users. To reduce operation/management burden, SNTU 764FC series can control and monitor remote unit via Embedded Operation Channel (EOC) by following ITU-T G.991.2. Administrators can also easily configure SNTU 764FC series through Telnet (SSH), Web (HTTP/HTTPS) or through SNMP agent.
